

ABSTRACT OF THE INVENTION

_____The present invention provides for a method and system of importing
or creating individual profiles with associated keyphrases and querying all
sources of information on a network based on user-based or individual-based
5 keyphrases with relevant objects, such as documents, retrieved based on
keyphrase occurrence and based on association to individuals who have
matching keyphrases, thereby allowing the user to easily identify interested
individuals and electronically mail relevant objects of interest to selected
individuals or to add objects to an action list.
